EXAMINER'S SECOND SUPPLEMENTAL AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Ian Schutter on May 10, 2004. The application has been amended as follows:

2. The following changes have been made to the application in order to clearly describe the invention and to define the claimed invention over the prior art of record:

Claim 13 has been replaced with:

--13. A guiding device, comprising:

an elongated, first portion having a finger-resting surface and a bottom surface opposite to said finger-resting surface;

an elongated, second portion extending along said first portion, said second portion having an upstanding section and an inclined scale-supporting section, said upstanding section projecting upwardly from said finger-resting surface and having an uppermost free end; said upstanding section being positioned between said scale-supporting section and said first portions, said first and second portions having a generally T-shaped cross-section; and

an elongated first scale having a lower surface rigidly and unreleasably attached to said scale-supporting section, an upper surface having first indicia to indicate predetermined lengths along said first scale, an innermost edge of said first scale positioned closest to said free end of said upstanding section, and an outermost edge remote from said innermost edge and forming a free end of said first scale such that an implement can be moved against said free end of said first scale, and said supporting surface being substantially flat and positioned directly beneath and along the entire length of said finger-resting surface directly adjacent said upstanding section and beneath said scale supporting section to permit smooth application of said guiding device on the working surface, wherein the substantially flat supporting surface cooperates with the scale supporting section to define a generally V-shaped cross-section, and wherein said guiding device has a solid cross-sectional configuration,

said bottom surface of said first portion being configured to be placed against a substantially flat working surface, and said upper surface of said first scale being inclined with respect to the working surface such that said innermost edge of said first scale is further from the working surface than said outermost edge of said first scale, and

said finger-resting surface permitting fingers of a user gripping said guiding device to be positioned on said finger-resting surface while being protected from said implement by said upstanding section during movement of the implement along said guiding device, adjacent said first scale. --

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tania C. Courson whose telephone number is (571) 272-2239. The examiner can normally be reached on Monday-Friday from 8:00AM to 4:30PM.
